

Nutcache - GitHub Integration

Follow these steps to enable nutcache version control integration with GitHub.

1. Click the  integration icon to begin.

2. Click the  toggle button to activate GitHub integration.
3. Nutcache automatically generates the web hook url and the secret needed to complete the integration in GitHub. These values can be changed if needed.
4. In GitHub go to settings option for your repository

5. Click Add webhook
6. Complete the form with the url and secret supplied by nutcache.

Webhooks / Add webhook

We'll send a POST request to the URL below with details of any subscribed events. You can also specify which data format you'd like to receive (JSON, x-www-form-urlencoded, etc). More information can be found in [our developer documentation](#).

Payload URL *

https://example.com/postreceive

Content type

application/json

Secret

Which events would you like to trigger this webhook?

☒ Just the push event.

☐ Send me everything.

☐ Let me select individual events.

☒ Active

We will deliver event details when this hook is triggered.

Add webhook

7. Make sure Content type is application/json

8. Customize the level of notifications desired

Which events would you like to trigger this webhook?

☒ Just the push event.

☐ Send me everything.

☐ Let me select individual events.

Click Add webhook and you are done.
